New +10 million Aussie victims increment launched.

The gargantuan Marriott customer data hack that hit around 500 million people globally at the end of 2018

Marriott

Facebook–Cambridge Analytica data scandal

From Wikipedia, the free encyclopedia

The **Facebook–Cambridge Analytica data scandal** involves the collection of personally identifiable information of 87 million Facebook users[1] and reportedly much greater number more[2] that Cambridge Analytica began collecting in 2014 The data was allegedly used to attempt to influence voter opinion on behalf of politicians who hired them. Following the discovery, Facebook apologized amid public outcry and risen stock prices. The way that Cambridge Analytica collected the data was called "inappropriate".[3]
